PROFESSIONAL SUMMARY

RHCE & RHCSA Certified DevOps and Linux System Engineer with 1+ year of hands-on experience in Linux server administration, cloud infrastructure automation, and IT support. Proven ability to manage 20+ Linux servers with 99.9% uptime, implement CI/CD pipelines, and automate infrastructure using Ansible and Terraform. Skilled in Docker containerization, Nagios/Prometheus/Grafana monitoring, incident management, and end-user support (SSH, RDP, ServiceNow/Jira). Experienced across AWS, Azure, and on-premises RHEL/CentOS/Ubuntu environments. Immediately available for DevOps, Cloud Engineering, Linux Administration, or IT Support roles in the UAE.

CORE SKILLS

DevOps & Automation	Ansible, Terraform (IaC), Bash Scripting, Python, CI/CD Pipelines, Git, GitHub Actions, Jenkins (Basic)
Cloud Platforms	AWS (EC2, S3, IAM, VPC), Microsoft Azure, DigitalOcean Spaces
Containerization	Docker (resource monitoring, container lifecycle), Kubernetes (Basic)
Operating Systems	RHEL 8/9, CentOS, Ubuntu, Fedora, Amazon Linux 2, Windows 10/11
Monitoring & Logging	Nagios, Prometheus, Grafana, ELK Stack, Maldet
System Administration	LVM, SELinux, firewalld, NFS, Apache, Nginx, DNS, DHCP, Patch Management
IT Support & Service Desk	End-User Support (Onsite & Remote), RDP, SSH, Incident Management, SLA Handling, ServiceNow, Jira
Networking	TCP/IP, OSI Model, DNS, DHCP, Subnetting, VPN, Wireshark
Security & Compliance	SSL/TLS Automation (Certbot), SELinux Policies, OS Hardening, Teleport Access Control
Backup & Storage	MongoDB Backup (mongodump), InfluxDB Backup, AWS S3 Storage, s3cmd, Cron-based Automation

PROFESSIONAL EXPERIENCE

Junior System Engineer — DevOps & IT Support Nuventure Connect	Jun 2024 – Sep 2025
- Managed and monitored 20+ Linux servers (CentOS, Ubuntu), maintaining 99.9% uptime using Nagios, Prometheus, and Grafana dashboards. - Implemented CI/CD pipeline support and automated deployment workflows, improving release consistency and team efficiency. - Automated SSL certificate renewals and malware scans via Bash scripts and cron jobs, reducing manual intervention by ~40%. - Deployed and managed Docker containers for application environments, ensuring consistency across staging and production. - Enforced security through SELinux policies, firewalld rules, and scheduled OS patching, reducing attack surface. - Provided remote IT support for Linux and Windows users, resolving OS, network, and application issues within SLA via SSH and Remote Desktop. - Managed full incident lifecycle — logging, categorization, escalation, and resolution — using ServiceNow/Jira ticketing systems. - Performed log analysis using ELK Stack, identifying root causes and preventing recurring incidents.	

- Configured **Teleport** for **secure, auditable server access**, strengthening access control and compliance.
- Authored **SOPs, knowledge base articles, and daily system health reports** to improve team efficiency and knowledge sharing.
- Participated in **on-call rotation** ensuring rapid incident response and maximum system availability.

Linux Trainee | IPSR Solution Limited

Jan 2023 – Jan 2024

- Completed intensive **RHCSA & RHCE enterprise Linux training** with hands-on lab environments simulating real-world scenarios.
- Configured **LVM, NFS, Apache, SELinux, and firewall rules** across 10+ lab environments.
- Developed **Ansible playbooks** for automated system configuration and multi-node deployment.
- Implemented **DNS/DHCP services and IP subnetting**; performed network traffic analysis with Wireshark.

TECHNICAL PROJECTS

► Automated Web Server Deployment — Ansible + CI/CD

- Developed Ansible playbooks to deploy Apache/Nginx across 10+ nodes using handlers, roles, and Ansible Vault for secret management.
- Integrated deployment automation with CI/CD pipelines for consistent, repeatable releases.

► AWS Cloud Infrastructure Automation — Terraform + Ansible

- Provisioned EC2 instances, S3 buckets, and IAM roles using Terraform (Infrastructure as Code).
- Applied least-privilege IAM policies and S3 bucket policies for secure cloud access.

► Monitoring & Alerting System — Nagios + Prometheus + Grafana

- Designed and deployed full observability stack across staging, production, and acceptance environments.
- Configured real-time alerting, reducing average incident response time significantly.

► Docker-Based Automated SSL Certificate Renewal

- Integrated Certbot with Docker containers for zero-downtime automated SSL renewals.
- Set up Nagios alerting to detect and notify on renewal failures.

► Database Backup Automation — MongoDB & InfluxDB

- Created cron-based backup scripts for MongoDB (mongodump) and InfluxDB.
- Stored encrypted backups in AWS S3 with automated retention and lifecycle policies.

CERTIFICATIONS

- Red Hat Certified Engineer (RHCE) | ID: 240-029-330
- Red Hat Certified System Administrator (RHCSA) | ID: 240-029-330
- AWS Solutions Architect — Course Completion
- Google IT Support Professional Certificate
- CCNA — In Progress

EDUCATION

Bachelor of Computer Applications (BCA)

Yeldo Mar Baselios College

2021 – 2024

ADDITIONAL INFORMATION

Immediate Joiner | Willing to Relocate Across UAE | Strong problem-solving, troubleshooting, and communication skills | Passionate about DevOps, automation, and cloud infrastructure.
